# CUSTOMERS BY COUNTRY

```
SELECT  
COUNTRY, COUNT(*) AS COUNTRY_WISE_CUSTOMER  
FROM  
CUSTOMERS  
GROUP BY COUNTRY;
```

|   | country | country_wise_customer |
|---|---------|-----------------------|
| ▶ | BR      | 10002                 |
|   | IN      | 20089                 |
|   | UK      | 10155                 |
|   | US      | 34931                 |
|   | CA      | 9906                  |
|   | AU      | 7021                  |
|   | DE      | 7896                  |

**Launch Targeted Loyalty Programs in Top Markets:** Since the US and India (IN) have the highest concentration of users, the company needs to run retention campaigns, such as exclusive rewards or early-access discounts, specifically tailored for these two regions.

**Scale Advertising in Growth Regions:** The UK, Brazil (BR), and Canada (CA) have a solid foundation of around 10k customers each. The company should increase its localized ad spend here to efficiently acquire new users and scale these markets up.

**Execute Country-Specific Product Pushing:** The company should query the transactions and products tables to identify regional best-sellers, then immediately blast personalized product recommendations via email or push notifications based on what sells best in each country.

**Cut Low-Performing Campaigns:** By cross-referencing the campaigns and events\_clean tables, the company needs to identify which active marketing campaigns are burning budget without driving conversions, kill them immediately, and reallocate that budget to winning campaigns.

# Customers by Acquisition Channel

```
SELECT  
ACQUISITION_CHANNEL, COUNT(CUSTOMER_ID) AS TOTAL_CUMSTOMER  
FROM  
CUSTOMERS  
GROUP BY
```

|   | acquisition_channel | Total_cumstomer |
|---|---------------------|-----------------|
| ▶ | Referral            | 9968            |

## 🎯 Best Responding Target Segment

**Allocate more campaign budget toward the best-responding segment.  
Customize messaging to match that segment's behavior and preferences.**

# Customer Journey Funnel

```
SELECT
  event_type,
  COUNT(*) AS total_events
FROM events_clean
WHERE event_type IN ('view','add_to_cart','purchase')
GROUP BY event_type;
```

|   | event_type  | total_events |
|---|-------------|--------------|
| ▶ | view        | 1043573      |
|   | add_to_cart | 284370       |
|   | purchase    | 103127       |

## ▼ Customer Journey Funnel (View → Add to Cart → Purchase)

If add-to-cart rate is low, improve the product page (images, descriptions, pricing).

If purchase conversion is low, simplify the checkout process and send abandoned cart emails.

# Products with Highest Refund Rate

```
SELECT

## Conversion Rate by Device Type

Optimize the UI/UX for the device type showing the lowest conversion.  
If mobile conversion is low, improve the mobile app or responsive design.
